Order No. G. 7223-36 & 7/1/27
Canceling & superseding the reorganization of

The Secy & Comptroller

(1) Gen 349

Subject.- REVIVING THE APPOINTMENT OF SANITARY COMMISSIONER and getting some Officers trained in Public Health.

The Mysore Public Health Department was constituted in the year 1907 and consisted of:

The Senior Surgeon who was ex-officio Sanitary Commissioner,

A Deputy Sanitary Commissioner,

3 Divisional Sanitary Officers,

8 District Sanitary Officers, and

3 Health Officers for the Cities of Bangalore, Mysore, and K.G.F.

Fl. 199-26
7-1-27

2) This continued till the year 1917 when the appointment of Deputy Sanitary Commissioner was abolished and a whole-time Sanitary Commissioner was appointed, the Senior Surgeon being relieved of his ex-officio duties. The arrangement was again revised in the year 1922, when, as a measure of retrenchment, the appointment of a whole-time Sanitary Commissioner was abolished and the Senior Surgeon was made ex-officio Sanitary Commissioner to Government.

3) Simultaneously with the changes described above, there were corresponding changes in the lower grades of the Public Health Department. The number and pay of Divisional and District Sanitary Officers underwent various changes. In 1922, these appointments were altogether abolished and other arrangements made for the discharge of the duties performed by them.

-do-
2 Jan

4) The present Sanitary organization of the State is as follows:-

(1) The Sanitary Department is under the Senior Surgeon who is ex-officio Sanitary Commissioner;

(2) There are three Health Officers for the Cities of Bangalore, Mysore, and KG.F.;

(3) There are 8 Chief Sanitary Inspectors in charge of the 8 Districts in the State;

(4) There are Sanitary Inspectors (and Vaccinators) in all the Taluks in the State;

(5) The work done in the Public Health and Vaccin Institutes is part of the work of the Sanitary Department, and ~~is~~ was under the independent control of the Director of the Public Health Institute, ~~who has got his own staff~~.

The work done by the Sanitary Department at present may be described as including -

(1) the Sanitary activities of the Government and of local bodies,

(2) the activities connected with the work of the Public Health Institute, and

(3) those of the Vaccine Institute.

The first is under the control of the ex-officio Sanitary Commissioner, and the second and third (were, until recently,) under the control of the Director of the Public Health Institute. This (latter) arrangement ~~had~~ has undergone a further change as Dr. Pani recently retired from service and a comparatively junior officer took his place. The P. H. and the Vaccine Institutes are now under the Ex officio Sanitary Commissioner.

It will be seen from the foregoing summary that though the Sanitary Department made a very auspicious start at the beginning, its fortunes have been steadily declining and that its organization at present is anything but satisfactory. It has to be pointed out, on the other hand, that the Sanitary activities of the State are extending of late. With the passing of the Local Self-Government Bills ~~now before the Council~~ and the increased attention that is going to be given to the improvement of the Malnad, the Sanitary Department is likely to become a very important feature of the Administration. It is necessary, therefore, to place it on a satisfactory basis so as to enable it to cope with the work that will shortly be thrown upon it.

The ex-officio Sanitary Commissioner who, as Senior Surgeon, has control of one of the largest and most important departments in the State, can scarcely find

The Senior Surgeon has been requested to submit detailed proposals in this behalf and the matter may be further considered on the receipt of his report.

10) In this connection it appears to be necessary to anticipate future requirements and get some officers trained in Public Health. We have now three Health Officers - one in Bangalore, another in Mysore, and the third in the Kolar Gold Fields. One is proposed to be sent to the Shimoga District. It is desirable also, I think, to replace the Chief Sanitary Officers by men trained in Public Health. It appears to be necessary, therefore, that two or three of our officers should be sent to England every year for training in Public Health during the next ~~two~~ three or four years. The period of training is, I think, about ten months and the deputation expenditure, about Rs. 6,000 per officer. The Senior Surgeon may be requested to make a selection of officers and submit proposals to Government in the matter. The cost of the deputation may be met by re-appropriation if possible, or by an additional grant.

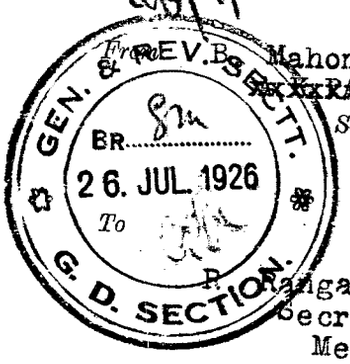
OFFICE OF THE SANITARY COMMISSIONER
WITH THE GOVERNMENT OF MYSORE,

Bangalore, dated 26th July 1926.



From Mahomed Usmon, Esq., L.M. & S.
~~Rao Bahadur M. RANGANADHAM CHETTY, Esq., B.A., B.L.~~
Sanitary Commissioner with the
Government of Mysore,
BANGALORE.

To Rao Bahadur M. Ranga Rao, Esq., B.A., B.L.,
Secretary to the Government of Mysore,
Medical & Agricultural Departments, Bangalore.

SIR,

With reference to the correspondence ending with your letter No. G. 498/San. 3-26-1 dated the 17th July 1926, calling for proposals for the re-organisation of the Sanitary Department, I have the honor to state that the matter is engaging my attention and that I hope to submit the proposals on or about the 1st August 1926.

I have the honor to be,

Sir,

Your most obedient servant,

M. Mahomed Usmon

Sanitary Commissioner, M.G.

23) An extract from the Confidential Branch file in regard to the revival of the post of Sanitary Commissioner is placed in the Note. (Page 7).

DLO
10/8/26

The arrangement of the Senior Surgeon being Sanitary Commissioner may not be convenient for a long time but may perhaps be adopted for the present with a view partly to keep down the cost.

25) The S.V. Surgeon's proposal to make the Dt Medical Officers also Sanitary Officers could if accepted take us back to old times but as he is proposing the employment of separate Health Officers under Dt Boards this proposal may be approved. It is of course unnecessary to have two full time Dt Sanitary Officers in each District, one paid by Government and one by the District Boards.

26) It should be possible to have only one officer who will work both with the Dt Boards and under the Sanitary Commissioner direct. This will be a revival of the arrangement which existed before the last revision. Whether this arrangement is not preferable is for consideration. In the case of Shimoga Dt we have recently posted

VI.Revival of the Public Health Department (Dr.Parthasarathy's case)

In connection with the revival of the Public Health Department, the case of Dr.Parthasarathy was considered and it was decided that in place of an Assistant Superintendent for Serum work suggested by the Senior Surgeon, a Superintendent on a pay of Rs.400--30--700 be appointed to deal with Serum, Vaccine Lymph, etc., and that this appointment should be given to Dr.Parthasarathy. The rest of the proposals were generally approved. The Assistant Superintendent, Vaccine Institute, may be replaced by a subordinate officer.

I submit a report of the proceedings of the meeting of the Dewan, the First Member and the Senior Surgeon on the afternoon of the 6th instant for perusal.

37 The revision proposed in the draft order results in an increase of recurring expenditure over the present level to the extent of about - Rs.7,000/- per annum. (In the proposition statement appended to the draft which may be got verified by the Comptroller, the net increase is shown as Rs.6,048/- p.a. In sanctioning the - appointment of a District Health Officer to Shimoga the saving consequent on the abolition of the Chief Sanitary Inspector has already been taken into account and for the purpose of this proposition, the present scale of the existing Chief Sanitary Inspectors will have to be taken as only 7.)

38 I am afraid the revenue position does not admit of large additions to recurring expenditure. Our revenues are inelastic and there are various pressing demands for expenditure on objects of public utility.

39 The ~~large~~ increase in recurring expenditure is mainly due to the proposed creation of the - Deputy Sanitary Commissioner. I note, however, that it is not proposed to make this appointment immediately and I presume that the State's finances will receive due consideration before it will be decided to create this appointment. In this view I would suggest ~~an~~ addition of the word - " eventually " in page 4 of the draft. If this appointment be excluded from the proposition statement, the revision would result in a little

9 May add that to sanction these proposals without very soon appointing a Dep.t San.r Cr. will very much like asking Hamidullah that the part of Hamidi. The whole idea of reorganising the San.r Dept is based on the fact that the S.S. is too busy an officer to give individual attention to sanitary matters and that such individual attention is necessary. A Dep.t San.r Cr. will be able to select right type of staff with probably very soon reached when a whole time San.r Cr. will become necessary. With this understanding, the draft may be considered.

NOTE—Contn. Sheet

Final Note by the First Member of Council.

Subject :—

Reorganization of the Public Health Department.

Retrenchments were effected in the Sanitary Department in 1921 and 1922 on the recommendation of the Special Finance Committee. The post of a whole-time Sanitary Commissioner was abolished in the year 1922 and the Senior Surgeon became Ex-officio Sanitary Commissioner and Advisor to Government and District Boards in Sanitary matters. Dr.Pani who till then was the Sanitary Commissioner, became whole-time Director of the Public Health Institute having the Vaccine Institute also under his control. The posts of District Health Officers were abolished and Chief Sanitary Inspectors were appointed in their place for work under the District Boards.

The experience of the last four years has shown that the arrangement of having Chief Sanitary Inspectors instead of District - - Health or Sanitary officers has not proved successful and that an officer with higher qualifications is required for attending efficiently to Sanitary work in the Districts. This has been noticeable more particularly in the Malnad, in which research and investigation form an essential part of Public Health work. It has on this account been found necessary to post a District Health Officer to Shimoga. The passing of the District Boards and the Village Panchayets Regulations also makes it desirable that there should be in every district an officer with suitable Public Health qualifications competent to advise local bodies on sanitary matters.

As regards the Public Health Institute, it is at present in charge of a Superintendent. Experience has shown, however, that the work of the Public Health Institute has grown largely during recent years and is more than can be conveniently attended to by one officer. Further, the Government have under contemplation a scheme for the pre-

preparation of certain vaccines and sera in the Public Health Institute For these reasons, there is need for another officer in this laboratory

In view of all these considerations proposals were called for from the Sanitary Commissioner for the reorganisation of the Department. On a full consideration of these proposals and in further consultation with the Senior Surgeon, it is proposed to reorganise the Public Health Department on the following lines:-

The Senior Surgeon will for the present continue as Sanitary Commissioner.

A Deputy Sanitary Commissioner on a pay of Rs.700-50-800 will eventually be appointed to assist him in sanitary matters.

There will be for the Public Health Laboratory and the Vaccine Institute two Superintendents on Rs.400-30-700 each working directly under the Sanitary Commissioner. One of them will be in charge of Chemical, Bacteriological and Pathological work and the other in charg of the preparation of sera, vaccine, lymph, etc. including the work now done in the Vaccine Institute.

Dr. Dominick and Dr. Parthasarthy will take these two places. and be in charge of the two sections mentioned above. They will each be assisted by a subordinate officer.

The present Superintendent of the Vaccine Institute will be posted as a Health Officer. The Assistant Superintendent of the Public Health Institute will continue to assist Dr. Dominick and another officer appointed to assist Dr. Parthasarthi when the work of serum preparation is taken up as part of the work of the Public Health ~~Institute~~ Department.

There will eventually be a whole-time Health Officer for sanitary work in each District. But for the present, Health Officers wi be appointed for the Districts of Shimoga and Kadur. Mr.S.Ramachandi Rao has already been posted to Shimoga. Mr. Iswaramurthi will be posted for charge of the Kadur District. In the other Districts, the District Medical Officers will be Ex-officio District Sanitary Officers and they will get an allowance of Rs.50 per mensem for this wor The separate or Ex-officio District Health Officers to be appointed will work under the Deputy Commissioners of Districts and in co-ordination with the local bodies. The places of Chief Sanitary Inspect will be abolished, but they may, if the District Boards agree to be entertained by those bodies. Government do not think it necessa for the present to form a mobile corps for the Malnad Districts.

The above arrangements excepting the appointments of the Deputy Sanitary Commissioner and an Assistant to the Superintende in charge of the Vaccine Institute will come into effect forthwi

(23

Separate orders will issue about these two appointments.

The Sanitary Commissioner's proposal to prescribe a course of three months at the Public Health Institute for Medical Graduates and Sub Assistant Surgeons may also be approved.

The Sanitary Commissioner will be requested to submit detailed proposals for withdrawing the present Chief Sanitary Inspectors and the other incidental measures required to give effect to this order. Separate ~~orders~~ proposals are proposed to be called for about the reorganisation of the clerical staff of the Sanitary Commissioner's office.

A draft put up on the above lines and approved in Council is submitted for the gracious approval of His Highness.

Senior Surgeon in Mysore,
BANGALORE.

Sir,

I am directed to invite attention to correspondence ending with your letter No. C.33-3, dated the 10th July 1926 on the subject of re-organisation of the Sanitary Department. In this connection, Government consider that it is necessary to arrange for the training of some officers in England or elsewhere for appointment as Health Officers. I am therefore to request you to be so good as to submit proposals in this behalf at an early date. Proposals may also be made for the absorption of such of the Chief Sanitary Inspectors of Districts as are not doctors.

I have the honor to be,

Department of Public Health in Mysore. Jm 1006

No. C. 33-7

Enc. one

Office of the Sanitary Commissioner with the Government of Mysore,

Bangalore, dated the 2 Aug: 1926.

San. 3-26-2

From

B. MAHOMED USMON, ESQ., L.M. & S.,
Sanitary Commissioner with the Government of
His Highness the Maharaja of Mysore, BANGALORE.

To

R. RANGA RAO, ESQ., B.A.,B.L.,
Secretary to the Government of Mysore,
Medical & Agricultural Departments, BANGALORE.

Sir,

With reference to the correspondence ending with your letter No. G. 498/San. 3-26-1 dated the 17th July 1926, I have the honor to submit the following proposals for the re-organisation of the Sanitary Department. The first essential requirement for the development of work on the proper lines is the provision of a whole-time Officer for direction and general supervision. The experiment of having a full time Sanitary Commissioner has been tried for some years and I cannot say that it has met with unqualified success. For one thing such an Officer stands isolated from the established organisation for sanitary work including the control of epidemics, which latter is a work which in practice devolves almost wholly on the Medical Department. It is the Medical subordinates that figure prominently in disease prevention and it is they that advise the Local Bodies on important questions of sanitation that come up from time to time for consideration. In fact as their special reports show, they visit the affected villages long before the local Sanitary Inspector goes there and often-times have to look to the general preventive

measures as well, in addition to medical relief. (43)

(6.) A whole-time Sanitary Commissioner will not have enough work. Moreover, he cannot function effectively unless the entire service is provincialised with the Sanitary Inspectors and the Vaccinators centralised in the District Health Officer who in turn is directly responsible to the Head of the Department. I may take it that for many years to come such an independent organisation would be out of question considering the (1) expenditure and the duplication of staff involved. For the present therefore there is no need at all to break up the combined charge of Senior Surgeon and Ex-officio Sanitary Commissioner.

(2.) 2. Instead, I would propose the appointment of a Deputy Sanitary Commissioner who will be a whole-time Officer and to whom will be delegated, under direction all work of the nature of special inspections and investigations and the application of organised measur to control the adverse health conditions in one selected area after another. The duty of the Sanitary Commissioner to make annual inspections of the general sanitation and vaccination in towns and villages will remain unaffected. It is customary to regard the work of a Deputy Sanitary Commissioner as consisting mainly of inspections of local areas and in advising Local Bodies as to what they may do to improve the sanitary condition of towns and villages. Without disparaging the work done in the past in this direction, I might say that mere advice based on casual and machanical inspections has not so far been fruitful of much result The time has now come when the Departmental inspection should partake of the nature of an applied science and should have for its object not merely a summing up of the conditions evident to any casual observer but to apply scientific methods to determine the causes

474

operating in any local area to undermine the health of the inhabitants. The work would practically be an extension of strictly scientific laboratory methods to study local conditions first-hand and to re-inforce such methods by a statistical study of the facts gleaned from local enquiry and records. In my opinion the future progress of sanitation in Mysore must depend very largely on concentrated efforts put forth in this direction and on the organised measures which suggest themselves in consequence, for which adequate ~~gant~~ grants-in-aid should be made to local bodies. One may sometimes feel impatient of the preliminary spade-work and may want to get into action at once. The practical Sanitation however, must know exactly what he is aiming to accomplish and to this end must be persistent in his investigations to find out just what the problem is and how to set about tackling it. A practical illustration in a small way of the correctness of this statement is furnished by the ankylostomiasis and anti-malaria campaigns which it has been possible to initiate in selected areas of the Mysore District by employing a very small investigation staff kindly sanctioned by Government a little over a year ago and by properly co-ordinating its work with that of the local Medical and Sanitary establishments. In the words of Col: Ross, begin by arranging to provide adequate funds, continue by laying down a definite policy as to what is wanted, what is aimed at, what is hoped for and proceed then to carry it into effect.

(3) My first proposal is therefore the appointment of a Deputy Sanitary Commissioner on Rs 600-50-800, whose duty it will be not only to routine inspections whenever necessary but also to undertake and discharge the more important duty of organising and personally conducting scientific investigations in unhealthy areas. The Deputy Sanitary Commissioner will of course have all

the facilities he needs from the Central Laboratory, viz., the Public Health Institute, for purposes of his special investigations from time to time.

3. Next in regard to the appointment of District Health Officers. the question has to be considered in its bearing upon the statutory provisions of the new District Board and Village Panchayet Bills. The District Board Bill contemplates two kinds of Sanitary Officers - one a principal Sanitary Officer, employed by Government, independent of the District Board and competent to give it advice and the other employed by the District Board, subordinate to it and carrying out the instructions given by the Board. The question is whether there shall be two Sanitary Officers for each District. The principal Sanitary Officer has no statutory function beyond assisting the Board with his views.

In Madras, the Civil Surgeon is the Government Medical and Health Officer in the District and has all the staff and equipments provided by Government at his disposal. In his capacity as a Member of the Sanitation and Public Health Committee he can successfully co-ordinate the activities of the District Board Health staff and Government Staff. A similar arrangement is applicable to Mysore, under the provisions of the District Board Regulation: Only the District Medical Officer should be nominated the Chairman of the Public Health Committee and definite powers should be delegated to him to be exercised in this capacity, on behalf of the President of the District Board. If this is done, it seems enough if the District Medical Officer is also constituted the District Sanitary Officer with an allowance of Rs 50/- per mensem for the additional sanitary charge involved, instead of resorting to the much more costly but less effective expedient of appointing a whole-time District Health Officer for each district. Under this arrangement, the cost will amount to Rs 400/- per mensem for all the districts or Rs 4,800/- per annum.

(4)

(46)

The only objection will be that there will be no provision for the Sanitary Administration of Village Panchayets if the Deputy Commissioner is not given the assistance of a whole-time District Sanitary Officer. But we have also to consider how far any perpetual interference, savouring of domination, would be necessary or desirable or conducive to the development of the spirit of local Self-Government. What is needed is proper guidance from time to time and this purpose can be amply fulfilled by a regulated annual inspection by the District Medical and Sanitary Officer himself. Should however, these views be not acceptable to Government, I would submit, as an alternative proposal, that a whole-time District Sanitary Officer may be provided for each District on the existing scale of pay Rs 150-15-360/-. The cost on this account will be Rs 2,152/- per mensem or Rs 25,824/- per annum.

(45)

I may add that if this proposal is sanctioned, it may not be possible to entertain all the District Sanitary Officers at once, as qualified and suitable men are hardly likely to be available immediately. I would prefer deputing two selected Medical Graduates every year to Madras to receive training as First Class certificated Health Officers and employ them as District Sanitary Officers after such training. A University Degree - either Indian or Foreign, is not indispensable seeing that it is the practical training, experience and aptitude that really count far more than the possession of an academic qualification. Besides, as experience has proved to us, a University qualification whether acquired at the cost of the Officer himself or paid for by Government, is a factor of doubtful utility as it tends to breed discontentment and to lessen the output for effective work.

4. Corresponding to the second class District Healt..

(47)

Officer in British Territory, we have a Chief Sanitary Inspector who is the immediate subordinate of the District Board. The medical qualification is the same, to which a second class Health Officer's training is superadded. A similar training may be imparted to our men and the present designation, which is a misnomer, changed to District Sanitary Officer (second class). Of the existing Chief Sanitary Inspectors, two are non-medical men, one is to be retired in December next, two are too advanced in age to be usefully trained and only the remaining three marginally noted men are eligible for training. These three men may be sent for training and on return employed as District Sanitary Officers in the scale of Rs 100-10-200/- as against Rs 100-10-300 obtaining in Madras. The two unqualified men may either be absorbed in the cadre of Sanitary Inspectors or retired on such pension as may be admissible to them under the rules. The other three places may be filled up as vacancies actually occur by superannuation or, if Government so direct, the incumbents may revert to the Medical Department and their places taken by younger men who may be sent up for training as Second Class Health Officers.

1. Mr. Nur Singh, Kadur Dist.
2. " J. Simon, Kolar "
3. " M. Muniswami, Chitaldrug.

Eventually the cost consequent on this change will be Rs 1,288/- per mensem for all the eight Districts or Rs 14,256/- per annum. This cost is strictly debitable to the District Boards as these District Health Officers will be employees of the Boards. But until such time as the responsibility for maintaining these Officers, under the provisions of the new District Board Regulation, can be actually transferred to each District Board, the appointment may be subsidised by Government either wholly or in part.

I may add that in Madras there are at present 24 District Health Officers for Public Health work in Districts and 13 First Class and 13 Second Class for health work

(48)

in Municipalities. The rules to regulate the duties of District Health Officers (a copy of which is herein enclosed) are those similar to those which were formerly in force here in the case of District Sanitary Officers. The rules provide mostly for duties concerning matters which require the attention of District Boards.)

5. The present work in the Public Health Institute may be broadly classified under the heading :- (1) Bacteriological including Pathological as well as Public Health Sections, (2) Medico-legal and (3) Chemical. The future development must naturally range under these heads.

In regard to clinical diagnostic work there is a separate laboratory attached to each of the Victoria and Krishnarajendra Hospitals. A portion of the work which was formerly being done in the Public Health Institute is taken over by these laboratories. There is thus more time now for the Superintendent to devote to research and to the manufacture of selected stock vaccines. It is sometimes urged that it would be desirable to centralise all pathological laboratory work in the Public Health Institute, the reasons adduced being that examinations like the Wassermann, Widall, &c., if done in a Central Laboratory will minimise risks of errors due to personal equations, that the methods and results will be more uniform and that the expenses will be reduced to a minimum. But it is equally desirable in the interests of work in the premier Medical Institutions that all arrangements for diagnosis &c., should as far as possible be self-contained. It would certainly be a retrograde step to take away the clinical laboratories already established in these Institutions. On the other hand, the muffusil Dispensaries are not utilising the services of the Institute to the extent they ought to, for

(49

diagnostic purposes. A procedure will therefore be established so that full advantage may be taken of the Public Health Institute by mufussil medical men.

To acquire the required degree of skill in the technique of taking blood, making smears &c., for bacteriological examinations and to sufficiently realise the significance and the value of laboratory diagnostic methods, it is absolutely necessary to put Medical Graduates and Sub Assistant Surgeons through a three months' course at the Public Health Institute. The Institute will thus also be a centre for imparting post-graduate instructions.

At present, although bacterial vaccines are issued from the Public Health Institute, they belong to the class of autogenous and not stock vaccines. It is suggested that the preparation of T.A.B. Cholera and Anti-rabic vaccines may be profitably undertaken. But plague vaccine is much too costly to prepare and as a matter of fact the Bombay Laboratory has been incurring a declared loss on account of this vaccine. Moreover, the recorded statistics show that plague is steadily tending to dwindle down and it is reasonable to presume that the demand for anti-plague vaccine will not exceed the present level even if it does not actually decrease. It is also doubtful whether cattle sera can be profitably manufactured locally. The Director of Agriculture - (Dr. Coleman) was not in favor of the proposal to start the preparation of anti-renderpest serum locally and it is neither necessary nor desirable to risk an attempt for its manufacture in spite of the weighty opinion expressed by that Officer. The only vaccine that can be usefully prepared is anti-rabic vaccine and this may be done under the personal direction and supervision of the Superintendent himself.

The establishment of active and continuous research would ~~would~~ make a great advance and is likely to prove

(50)

of the utmost value to practical sanitation in the State. By its very nature research work has to proceed continuously for a long time without being fruitful of any definite result or it may be yield starting results in a short time. Time and unremitting attention are essential factors for success. A research atmosphere is by itself a thing worth striving for.

For all these purposes, I am satisfied after careful consideration, that in addition to the Superintendent, the superior staff needed is an Assistant Superintendent on Rs 150-15-360 and two subordinates of the grade of second class Health Officers on Rs 100-20-200 with a laboratory allowance of Rs 20/- per mensem. The Assistant Superintendent should be a Medical Graduate who is also a first class graduate in Chemistry as all the work which is other than routine and which is worth doing requires a sound knowledge of pure as well as Physiological Chemistry. I would nominate for this post Mr. C.V. Natarajan who has passed his M.B.B.S., as well as B.Sc., both in the First Class. He was a Mysore Government stipendary scholar in the Medical College but had to be given a discharge on passing, for want of vacancies in the Medical Department. He is at present the Demonstrator in Anatomy in the Medical College and his appointment recently to assist Dr. Pani during the absence of Mr. Dominick in England was, I understand, sanctioned by Government.

Although a Public Health Degree is not needed for the work of an Analytical or a Physiological Chemist, it is desirable that an officer attached to the Institute should have a public health qualification also in order to be able to attend to every class of work that is customarily undertaken in a combined Chemical and Bacteriological Laboratory. I therefore propose his being deputed to the School of Tropical Medicine and Hygiene, Calcutta, to qualify himself for the D.T.H.

(51)

of Calcutta University. The course is one of nine months. As applications for admission has to be made before the close of August, I request the favor of an early orders. Mr. Natarajan may also, at a later date be deputed to Coomoor to receive practical instruction in the method of preparation of anti-rabic vaccine so as to be of assistance in that work here.

The Sub Assistant Surgeon at present working in the Institute may be trained either at Calcutta or at Madras and permanently attached to the Institute. Proposals for his training will be submitted in due course.

6. The "Mobile Units" which are established in Madras and are about to be organised in Bombay also form a link between the Laboratory and/Public Health Administration. These units are primarily intended to deal with epidemics promptly and effectively, but will of necessity have to be impressed by the Deputy Sanitary Commissioner to undertake special epidemiological investigations as a part of their duties. The Public Health Laboratory will supply them with equipment, and the Dy: Sanitary Commissioner will check results and give advice.

The units will have a great deal of work to do, particularly in the Malnad where at least 3 Units are required immediately. They may for the present be on a temporary footing, the cost being debited to the Malnad Improvement Grant. Each unit will consist of a Medical Graduate on Rs 100/- plus fixed T.A. of Rs 50/-, a Senior Sanitary Inspector on Rs 67-4-87 plus fixed T.A. of Rs 30/- a Shekdar on Rs 50/- plus Rs30/- and two servants on Rs 12/- plus Rs 8/-, involving a cost of Rs 380/- per mensem. The three units together with cost Rs 1,140/- per mensem or Rs 13,680/- per annum.

7. In consequence of the re-organisation of the Department the work in my own office will be considerably increased. It is therefore necessary to restore the establishment to what it was four years

(52)

ago when it was retrenched on the advice of my predecessor. The Office at present consists of a Manager (Rs 100-10-150), one Clerk (50), one Clerk (40), Typist (35) and one Registering Clerk (30). To this should be added one Record-keeper, and an additional Clerk, a Deaftsman and a tour Clerk for the Deputy Sanitary Commissioner. To facilitate the expanded work which devolves on me consequent on the re-organisation, an Office Assistant is absolutely necessary. I request that in lieu of a Manager an Office Assistant [illegible] on Rs 200-10-250 may kindly be sanctioned. The scale of pay of Clerks needs revision to bring it into line with that obtaining in the Senior Surgeon's Office. I recommend the seven Clerks being grouped as follows:- 2 Clerks on Rs 57-4-97, 3 on Rs 35-2-55, 2 on Rs 25-1-35 and a Draftsman on Rs 35-2-55. The number of servants will have to be increased by at least three on Rs 12/- to provide for the work of the Deputy Sanitary Commissioner. The extra cost on account of the revision is Rs 180/- per mensem or Rs 3,960 per annum.

To sum up, my proposals for re-organisation are for (1) the appointment of a Deputy Sanitary Commissioner. (2) the combination of the Medical and/Sanitary charges in Districts in the District Medical Officer or as an alternative, to revive the posts of whole-time District Sanitary Officers, (3) the creation of a separate cadre of District Board Health Officers and absorbing such of the Chief Sanitary Inspectors as would be eligible for that cadre after training, (4) the provision of a minimum additional staff consisting of an Assistant Superintendent and two subordinates for the Public Health Institute, (5) the appointment of Mobile Units and (6) the revision of my office establishment. I may add that the proposals have been formulated strictly with an eye to supply immediate practical wants in the Sanitary Department and

(63)

also, in order that its working may be placed on a satisfactory and harmonious footing.

I have the honor to be,

Sir,

Your most obedient servant,

W Wilmot

LOCAL SELF-GOVERNMENT DEPARTMENT

(Public Health)

G.O. No. 143, P.H., 18th January 1926

District Health Officers—Duties—Revised rules with effect from 1st April 1926—Issued—Transfer of Public Health duties of District Medical Officers in municipalities employing no separate health officer.

READ—the following papers:—

From the Director of Public Health No. 727, P.H., dated 2nd May 1925.

From the Surgeon-General No. 893 Ac., dated 14th September 1925.

Order—No. 143, P.H., dated 18th January 1926.

The Government approve the proposal of the Director of Public Health to transfer to the District Health Officers the duties hitherto discharged by the District Medical Officers in regard to public health in municipalities which do not employ separate health officers. This order will have effect from 1st April 1926. The rules relating to the duties of District Health Officers prescribed in G.O. No. 1258, P.H., dated 27th July 1923, are accordingly revised and published in full in the notification appended to this order.

(By order of the Government, Ministry of Local Self-Government)

F. NOYCE,
Acting Secretary to Government.

To the Director of Public Health.
,, the Surgeon-General.
,, all Presidents of District Boards.
,, all Collectors
Gazette.

[Appendi

APPENDIX

Rules regulating the duties of District Health Officers.

1. The District Health Officer is the executive head of the health staff employed in a district. He shall be on duty in places other than his headquarters not less than 21 days in each month; but consistently with the proper performance of his duties and public interests in reference to epidemic diseases, gazetted holidays may be accepted as part of the 21 days so spent.

2. By the 7th of each month the District Health Officer shall submit to the President of the District Board programmes showing the localities which he intends to inspect during the following month.

3. The District Health Officer may depart from his programme if an outbreak of disease or other urgent cause necessitates his presence elsewhere. In such case he shall immediately report the fact, with reasons, to the President, District Board.

4. Programmes should be so arranged that all unions and other important villages may be inspected by the District Health Officer not less than once in each year.

5. The District Health Officer shall maintain a diary in which he should make brief daily entries as to the work done. This diary shall be submitted to the President, District Board, monthly and to the Director of Public Health and Assistant Directors of Public Health on their tours of inspection.

6. It is the duty of the District Health Officer—

(1) to examine and verify village vital statistics not merely by examining the registers and initialling them but by intensive investigation and if necessary by house-to-house inquiry in the village and by checking the information thus collected with the events reported in the registers. He should give instructions as to the proper classification of causes of death and generally advise as to the correct maintenance of birth and death registers;

(2) to note important sanitary defects in villages inspected and to make recommendations for remedying them;

(3) to make proposals for improving the supply of drinking water in villages inspected;

(4) to attend important fairs and festivals outside municipal towns, to advise beforehand as to the sanitary arrangements to be made thereat and to supervise the conduct of such arrangements in accordance with G.O. No. 1722, P.H., dated 13th December 1922;

(5) to visit localities where epidemics occur, to supervise the arrangements made and, if necessary, to concentrate part or all of his district health staff in order to check them;

(6) to verify the work of District Health Inspectors, to inspect the vaccination registers and test their accuracy and to call attention to any defects, false returns or excess in the number of unvaccinated children;

(7) to perform such other duties as the Director of Public Health or the President of the District Board may call on him to perform.

Reports by the District Health Officers shall be submitted to the President of the District Board, who shall forward them with his remarks to the Director of Public Health.

7. A copy of the monthly vital statistical returns shall be communicated to the District Health Officer. He will forward them to the President of the District Board with such remarks as he may think advisable.

8. Copies of daily cholera, smallpox and plague reports should be sent by the authorities concerned direct to the District Health Officer as well as to the District Medical Officer and the Director of Public Health.

9. Whenever, by perusal of statistical returns or otherwise, the District Health Officer has reason to consider that the mortality in any local area is abnormal or that any local area is threatened with epidemic disease, he shall bring the fact to the notice of the President of the District Board or the Chairman of the Municipal Council as the case may be, with his recommendations on the subject. The defects noticed in vaccination work in municipalities which do not employ separate Health Officers shall be reported by the District Health Officer to the District Medical Officer who will instruct the local medical officer to carry out the improvements suggested

10. Every Sanitary Inspector employed in local fund areas shall maintain a diary in a form prescribed by the Director of Public Health and approved by Government. This diary shall be open to inspection by the District Health Officer during his tours or at any time when he may think necessary to call for it.

11. It shall be the duty of the District Health Officer to assemble the health staff and to examine the conservancy plant in localities inspected by him, after giving due notice to the local authorities concerned, and he shall report in the manner stated in rule 5 as to the sufficiency, efficiency and economy of menial staffs and of plant employed.

12. In municipalities in the district which do not employ separate Health Officers all matters relating to public health which have hitherto been attended to by the District Medical Officer shall be dealt with by the District Health Officer. He shall also inspect all such municipalities at least once a year except those which have been inspected by the Director of Public Health or his assistants. He shall bring to the notice of Municipal Chairmen the proximity of any dangerous epidemic disease or conditions observed in rural areas surrounding the town that may endanger its water-supply or otherwise threaten the health of the inhabitants. He shall also visit the municipalities when any outbreak of epidemic disease occurs and recommend such action as he may consider necessary for the prevention of the spread of such epidemics to the adjoining rural areas.

13. The District Health Officer shall make recommendations to the President of the District Board as to the provision in any special locality

of disinfectants and sanitary equipment, and during his inspection shall satisfy himself as to the efficiency and conditions of such equipment as may be ordered to be supplied.

14. The District Health Officer shall examine the village sanitary inspection book, make suitable entries therein and call attention to defects in their maintenance.

15. In his attitude towards the population, it is important that the District Health Officer should remember that changes in sanitary conditions should be effected by persuading people of their necessity. He should during inspection discuss matters with the people in a friendly manner and endeavour to show them that it is worth while to follow sanitary directions. In this respect the assembly of the people on the evening following an inspection of a village and talking over with them the conditions found may be of utility. Lantern lectures, cinema lectures and demonstrations may also be arranged. Health propaganda work should constitute one of the most important items of the District Health Officer's functions.

16. The District Health Officer should attend meetings of the district board, taluk boards and union boards at which any important sanitary matter is about to be discussed, and he may state his views, if the presiding officer requests him to do so.

17. In connexion with vaccination the District Health Officer shall make himself acquainted with all matters likely to prejudice its satisfactory conduct and shall endeavour to persuade all persons showing unwillingness to accept it. The importance of the revaccination of adults should be constantly brought to notice.

18. The District Health Officer shall not engage in private practice.

19. The District Medical Officer has no disciplinary control over the District Health Officer, but the two should co-operate with each other in public health work such as the management of epidemics, fairs and festivals, etc., the District Medical Officer arranging for the treatment of possible patients and the District Health Officer for the prevention of disease. In short, there should be a free exchange of views and mutual help between the two.

Proceedings of the Government of H.H. the Maharaja of Mysore.

Read again:--

Government Orders Nos. G. 25243-63/Sa 106-20-1 dated 30th June 1921 and L.7567-82/Sany. 55-21-1 dated 26th June 1922 passing orders on the recommendations of the Special Finance Committee in regard to retrenchment of expenditure in the Sanitary Department.

2. Correspondence ending with letter No. C. 33-7 dated 5th August 1926 from the Sanitary Commissioner in Mysore forwarding proposals for the reorganisation of the Sanitary Department.

ORDER NO. G 7223-34

Dated 7th June 1927.

Under the Government Orders read above, the post of a whole-time Sanitary Commissioner was abolished in the year 1922 and the Senior Surgeon became ex-officio Sanitary Commissioner and Advisor to Government and District Boards in sanitary matters. Dr. Pani, who till then was the Sanitary Commissioner, became whole-time Director of the Public Health Institute having the Vaccine Institute also under his control. The posts of District Health Officers were abolished and Chief Sanitary Inspectors were appointed in their places for work under the District Boards.

(60)

2. The experience of the last four years has shown that the arrangement of having ~~the~~ Chief Sanitary Inspectors instead of District Health or Sanitary Officers has not proved successful, and that an officer with higher qualifications is required for attending efficiently to sanitary work in the Districts. This has been noticeable more particularly in the Malnad, in which research and investigation form an essential part of Public Health work. It has on this account been found necessary to post a District Health Officer to Shimoga . The passing of the District Boards and the Village Panchayets Regulations also make it desirable that there should be in every district an officer with suitable Public - Health qualifications competent to advise local bodies on sanitary matters.

3. As regards the Public Health Institute, it is at present in charge of a Superintendent. Experience has shown, however, that the work of the Public Health Institute has grown largely during recent years and is more than can be conveniently attended to by one officer. Further, Government have under contemplation a scheme for the preparation of certain vaccines and sera in the Public Health Institute. For these reasons, there is need for another Senior Officer in this Laboratory.

4. In view of all these considerations, proposals were called for from the Sanitary Commissioner for the reorganisation of the Department.

5. The Sanitary Commissioner has recommended the following measures for reviving the department and improving its work:--

(a) The continuance of the appointment of the Senior Surgeon as ex-officio Sanitary Commissioner;

(b) The creation of a post of Deputy Sanitary Commissioner on Rs. 600-50-800;

(c) The appointment of an Assistant Superintendent in the Public Health Institute for the manufacture of anti-rabic serum and the undertaking of continuous research therein;

(d) Prescribing a three months' course at the Public Health Institute to Medical Graduates and Sub Assistant Surgeons:

(e) The appointment of District Medical Officers as ex-officio Sanitary Officers with an allowance of Rs. 50, or in the alternative, the appointment of a whole-time District Sanitary Officer on Rs. 150-15-360 for each District;

(f) The appointment of the present Chief Sanitary Inspectors as District Board Sanitary Officers;

(g) The creation of a mobile unit for each of the Districts of Shimoga, Kadur and Hassan at a cost of Rs. 380 each per mensem for dealing with epidemics primarily and for undertaking epidemiological investigations; and

(h) The revision of the establishment of the Sanitary Commissioner's Office.

6. On a full consideration of these propo-

proposals, Government are pleased to direct that the Public Health Department be reorganised on the following lines:--

The Senior Surgeon will for the present continue as Sanitary Commissioner. A Deputy Sanitary Commissioner on a pay of Rs. 700-50-800 will be eventually appointed to assist him in sanitary matters. There will be for the Public Health Laboratory and the Vaccine Institute two Superintendents on Rs. 400-30-700 each working directly under the Sanitary Commissioner. One of them will be in charge of Chemical, Bacteriological and Pathological work and the other in charge of the preparation of sera, vaccine, lymph, etc., including the work now done in the Vaccine Institute. Dr. Dominick and Dr. Parthasarathy will take these two places and be in charge of the two sections mentioned above. These two officers will be assisted by two subordinate officers of the status of Medical Graduates or Sub Assistant Surgeons. The present Superintendent of the Vaccine Institute will be posted as a Health Officer and the Assistant Superintendent working in the Public Health Institute will continue to do so and assist Dr. Dominick. Separate proposals may be submitted regarding the appointment of an Assistant to Dr. Parthasarathi when the work of Serum preparation is taken up as part of the work of P.H. Dept.

There will eventually be a whole-time Health Officer for Sanitary work in each District. But, for the present, Health Officers will be appointed only for the Districts of Shimoga and Kadur. Mr. S. Ramachandra Rao

has already been posted to Shimoga. Mr. Isvara Murthi will be posted for charge of the Kadur District. In the other Districts, the District Medical Officers will be ex-officio District Sanitary Officers and they will get an allowance of Rs. 50 per mensem for this work. The separate or ex-officio District Health Officers to be appointed will work under the Deputy Commissioners of Districts and in co-ordination with the Local Bodies. The places of Chief Sanitary Inspectors will be abolished, but they may, if the District Boards agree to it, be entertained by those bodies. Government do not think it necessary for the present to form a mobile corps for the Malnad Districts.

7 The above arrangements, excepting the appointments of the Deputy Sanitary Commissioner will come into effect forthwith. Separate orders will issue about ~~the~~ these appointments ~~of the Deputy Sanitary Commissioner~~. The actual ~~extra~~ expenditure for the current year and the total ~~extra~~ expenditure per year involved in the proposals is shown in the statment appended. Steps will be taken for obtaining an additional grant for the purpose at the next Session of the Legislative Council.

and an Assistant to the Surgeon in charge of the Vaccine Institute

8 The Sanitary Commissioner's proposal to prescribe a course of three months at the Public Health Institute for Medical graduates and Sub Assistant Surgeons is approved.

9 The Sanitary Commissioner is requested to submit detailed proposals for withdrawing the present Chief Sanitary Inspectors and the

(64

other incidental measures required to give effect to this order.

10 Separate ~~Orders will issue~~ proposals may be submitted about the reorganisation of the clerical staff of the Sanitary Commissioner's Office.

S. O.

Government of His Highness the Maharaja of Mysore.

GENERAL AND REVENUE DEPARTMENTS.

G. O. No. G. 7223-34—San. 3-26-6, dated 7th January 1927.

Reorganisation of the Public Health Department.

Sanctions the ——

READ AGAIN—

1. Government Orders Nos. G. 25243-63—San. 106-20-1, dated the 30th June 1921 and L. 7567-82—San. 55-21-1, dated the 26th June 1922, passing orders on the recommendations of the Special Finance Committee in regard to retrenchment of expenditure in the Sanitary Department.

2. Correspondence ending with letter No. C. 33-7, dated the 5th August 1926 from the Sanitary Commissioner in Mysore, forwarding proposals for the reorganisation of the Sanitary Department.

ORDER No. G. 7223-34—SAN. 3-26-6, DATED 7TH JANUARY 1927.

Under the Government Orders read above, the post of a whole-time Sanitary Commissioner was abolished in the year 1922 and the Senior Surgeon became *ex-officio* Sanitary Commissioner and Advisor to Government and District Boards in sanitary matters. Dr. Pani, who till then was the Sanitary Commissioner, became whole-time Director of the Public Health Institute having the Vaccine Institute also under his control. The posts of District Health Officers were abolished and Chief Sanitary Inspectors were appointed in their place for work under the District Boards.

2. The experience of the last four years has shown that the arrangement of having Chief Sanitary Inspectors instead of District Health or Sanitary Officers has not proved successful, and that an officer with higher qualifications is required for attending efficiently to sanitary work in the Districts. This has been noticeable more particularly in the Malnad, in which research and investigation form an essential part of Public Health work. It has on this account been found necessary to post a District Health Officer to Shimoga. The passing of the District Boards and the Village Panchayets Regulations also makes it desirable that there should be in every district an officer with suitable Public Health qualifications competent to advise local bodies on sanitary matters.

3. As regards the Public Health Institute, it is at present in charge of a Superintendent. Experience has shown, however, that the work of the Public Health Institute has grown largely during recent years and is more than can be conveniently attended to by one officer. Further, Government have under contemplation a scheme for the preparation of certain vaccines and sera in the Public Health Institute. For these reasons, there is need for another Senior Officer in this Laboratory.

4. In view of all these considerations, proposals were called for from the Sanitary Commissioner for the reorganisation of the Department.

5. The Sanitary Commissioner has recommended the following measures for reviving the Department and improving its work :—

(*a*) The continuance of the appointment of the Senior Surgeon as *ex-officio* Sanitary Commissioner;

(*b*) The creation of a post of Deputy Sanitary Commissioner on Rs. 600—50—800;

(*c*) The appointment of an Assistant Superintendent in the Public Health Institute for the manufacture of Anti-rabic serum and the undertaking of continuous research therein;

(*d*) Prescribing a three months' course at the Public Health Institute to Medical Graduates and Sub-Assistant Surgeons;

(*e*) The appointment of District Medical Officers as *ex-officio* Sanitary Officers with an allowance of Rs. 50, or in the alternative, the appointment of a whole-time District Sanitary Officer on Rs. 150—15—360 for each District :

(*f*) The appointment of the present Chief Sanitary Inspectors as District Board Sanitary Officers;

(*g*) The creation of a mobile unit for each of the Districts of Shimoga, Kadur and Hassan at a cost of Rs. 380 each per mensem for dealing with epidemics primarily and for undertaking epidemiological investigations; and

(*h*) The revision of the establishment of the Sanitary Commissioner's Office.

6. On a full consideration of these proposals, Government are pleased to direct that the Public Health Department be reorganised on the following lines:

The Senior Surgeon will for the present continue as Sanitary Commissioner. A Deputy Sanitary Commissioner on a pay of Rs. 700—50—800 will be eventually appointed to assist him in sanitary matters. There will be for the Public Health Laboratory and the Vaccine Institute, two Superintendents on Rs. 400—30—700 each, working directly under the Sanitary Commissioner. One of them will be in charge of Chemical, Bacteriological and Pathological work, and the other in charge of the preparation of sera, vaccine, lymph, etc., including the work now done in the Vaccine Institute. Dr. Dominick and Dr. Parthasarathy will take these two places and be in charge of the two sections mentioned above. These two officers will be assisted by two subordinate officers of the status of Medical Graduates or Sub-Assistant Surgeons. The present Superintendent of the Vaccine Institute will be posted as a Health Officer and the Assistant Superintendent working in the Public Health Institute will continue to do so and assist Dr. Dominick. Separate proposals may be submitted regarding the appointment of an Assistant to Dr. Parthasarathi when the work of serum preparation is taken up as part of the work of the Public Health Department.

7. There will eventually be a whole-time Health Officer for sanitary work in each District. But, for the present, Health Officers will be appointed only for the Districts of Shimoga and Kadur. Mr. S. Ramachandra Rao has already been posted to Shimoga. Mr. Isvara Murthi will be posted for charge of the Kadur District. In the other Districts, the District Medical Officers will be *ex-officio* District Sanitary Officers and they will get an allowance of Rs. 50 per mensem for this work. The separate or *ex-officio* District Health Officers to be appointed will work under the Deputy Commissioners of Districts and in co-ordination with the Local Bodies. The places of Chief Sanitary Inspectors will be abolished, but they may, if the District Boards agree to it, be entertained by those Bodies. Government do not think it necessary for the present to form a mobile corps for the Malnad Districts.

8. The above arrangements, excepting the appointments of the Deputy Sanitary Commissioner and an Assistant to the Superintendent in charge of the Vaccine Institute will come into effect forthwith. Separate orders will issue about these two appointments. The actual expenditure for the current year and the total expenditure per year involved in the proposals is shown in the statement appended.

9. The Sanitary Commissioner's proposal to prescribe a course of three months at the Public Health Institute for Medical Graduates and Sub-Assistant Surgeons is approved.

10. The Sanitary Commissioner is requested to submit detailed proposals for withdrawing the present Chief Sanitary Inspectors and the other incidental measures required to give effect to this order.

No. C.23-11

Enc. One

Office of the Sanitary Commissioner with the Government of Mysore,

Bangalore, dated 19th January 1927.

Secy 3-26-9

From

B. Mahomed Usmon, Esq., L.M. & S.,
Sanitary Commissioner with the Government
of His Highness the Maharaja of Mysore, Bangalore

To

M. Venkatesa Iyengar, Esq., M.A.,
General Secretary to Government, In charge,
BANGALORE.

Sir,

With reference to para 10 of Government Order No. G. 7223-34/San. 3-26-6 dated the 7th January 1927, I have the honor to bring to the notice of Government that it is not possible to relieve Mr. P. Parthasarthi immediately from his present charge of the Pathological Laboratory attached to the Victoria Hospital until Mr. Sambasivan returns from Europe to take his place. As will be kindly observed from the correspondence ending with this office No. C.94-10 dated the 3rd January 1927 Mr. Sambasivan is due to return in the middle of May next and until then Mr. Parthasarthi has to continue in his present charge. It is impossible also to improvise any arrangement whereby the work of both the Pathological Laboratory and the Vaccine Institute can be combined in one and the same officer, as the duties of either Institution are by themselves too voluminous and too exacting to expect the same man to look after them with even a semblance of success. The effect on the work of Victoria Hospital itself would be most serious if an arrangement of this kind is to be thought of. Moreover, the purpose of posting Mr. Parthasarthi to the Public Health Institute is, I take it, not to replace the present officer who is in charge of the manufacture of vaccine lymph but to start the preparation of other vaccines and sera on a large scale along with calf-vaccine. So far as

2/

the calf vaccine itself is concerned, I am not at all sure whether Mr. Parthasarthi will be in a position to conduct the work himself straight off, unless he works in colaboration with the present Superintendent for some time. The correct ness of practical technique in all the stages of manufactur as distinguished from mere theortical knowledge - is a most important consideration, if one is to be sure of the potenc as well as of the purity of the lymph. As far as I am awar Mr. Parthasarthi exercised supervision in the Institute onc for five weeks in March and April 1922, and again for two weeks in May 1924, and on both these occasions the permanen incumbent was absent on leave. Such casual touch with the work does not amount to anything of the nature of practical efficiency. In these circumstances, I request that Govern- ment may be moved to defer the actual posting of Mr. Partha- sarthi to the Public Health Institute until May next and to permit me to issue instructions so that, in the meantime, Mr. Parthasarthi may attend the Vaccine Institute for one hour every two or three days to thoroughly acquaint himself with all practical details. After this and before actually assuming charge he may also be deputed to undergo further training at the Vaccine Institute, Belgaum for a fortnight.

2. In regard to Chief Sanitary Inspectors I beg to enclose the accompanying statement which shows that out of the seven existing men, five are qualified Sub Assistant Surgeons who were drafted from the Medical Department for service as Chief Sanitary Inspectors. These may be withdrawn immediately and posted on their ~~permanen~~ present pay for duty under the Representative of the Health Board in conformity with para 3 of the Government Order No. G. 7128-49/San. 1-26-35 dated the 24th December 1926. Proposals will be submitted separately for their eventual reabsorbtion into the permanent cadre of the Medical Department.

3. I would point out however that before the Sub Assistant Surgeons are actually detailed for anti-malarial or anti-hook-

anti hook-worm work, it is most essential that they should undergo a preliminary training to befit them for their new duties. Otherwise they would be unable to know an ankylostomiasis from a round worm ovum nor would they be able to conduct examinations of blood smears which form an integral part of the anti-malarial investigations. Without sufficient training these subordinates would be but a drag on the officer in charge instead of an aid to him. I would therefore propose that they may be deputed to undergo a months' training, first of all, under the Entomologist at Bangalore, followed next by a two months' course of Bacteriological work in the Public Health Institute. The entomological training is intended to equip them with a working knowledge as to the different species of mosquitoes and the methods of identifying them. If it could be conveniently arranged, the arrival of the Representative of the Health Board may be deferred by about 8 weeks so that trained staff may be kept ready for work under him. I venture to state that a previous training of the kind shortens labour, economises time and adds to the facilities for effective work by the Representative.

4. Concerning the two other Chief Sanitary Inspectors who are not Medical men I would request that Government may be pleased to provide a place for each of them in the arrangements to be made consequent on the reconstitution of the District Boards.

5. Necessary orders have been communicated appointing District Medical Officers of Districts, excepting Kadur and Shimoga, as ex-officio District Sanitary Officers with effect from the date of withdrawl of Chief Sanitary Inspectors, - under the sanction conveyed in para 7 of the Government Order under reference.

I have the honor to be,

Sir,

Your most obedient servant,

Sanitary Commissioner, M.G.

Dear Sir,

With reference to the correspondence ending with your letter No. G. 10340/San. 3-26-21 dated the 18th March 1927, I write to suggest that Mr. P. Parthasarthi may be designated as "Superintendent, Vaccine and Sera section, Public Health Institute"and Mr. G.M. Dominick as "Superintendent, Bacteriological Section. Public Health Institute and Chemical Examiner to Government" Under these designations, the Vaccine Institute will count as an integral part of the Public Health Institute.

Yours sincerely,

To

R. Ranga Rao, Esq., B.A., B.L.,
General Secretary to
Government,
Bangalore.

43157 Department of Public Health in Mysore.

Office of the Sanitary Commissioner with the Government of Mysore,

Bangalore, dated the 27th Jan: 1927.

Jan 5961

From

B. Mahomed Usmon, Esq., L.M. & S.,
Sanitary Commissioner with the Government of
His Highness the Maharaja of Mysore, Bangalore.

The General Secretary to
the Government of His Highness the
Maharaja of Mysore, B A N G A L O R E.

Sir,

In acknowledging receipt of your Memo No. G. 7854/ San. 1-26-44 dated the 26th January 1927 on the subject of the postponement of the Health Survey until June next, I have the honor to state that this change in the programme leaves clear interval of 3 months for the Chief Sanitary Inspectors proposed to be posted for duty under the - Representative of the Health Board being trained in the Agricultural and Public Health Laboratories. I would accordingly request sanction to the proposals submitted in para 3 of my letter No. C. 33-11 dated the 19th January 1927.

I have the honor to be,

Sir,

Your most obedient servant,

B Mahomed Usmon

Sanitary Commissioner, M.G.

The papers referred to relate to arrangements for giving effect to the Sanitary Programme which is under separate consideration. (Dy. No. 5736/San 1-26) Meanwhile these orders are only provisional.
